Haru is a modular spatial network that unfolds over the square and turns it into an actively used space. It is a barrier that does not interrupt, but absorbs life into itself, thus creating a new active urban space.

Whether you're alone or with others, the Haru bench system provides an open-ended seating solution without specific constraints.

Haru is infinite, able to grow from a single molecule into an infinite network.

FEATURES

The modular solution allows you to combine endlessly different solutions.

The plane with the same height of the seats and tables also allows the table to be used as a seat.

Evokes more versatile use of urban space and revitalization of urban non-places.

Table tops are made from 100% recycled plastic.

No visible fixing materials on the top surfaces.

The hot-dip galvanized steel frame and high-quality, knot-free wooden material makes the product very resistant to weather and use.

Extery quality without compromise- harmonious design, carefully selected materials and engineering considered to the last detail.

INSTALLATION

Anchored to a firm foundation.

Free-standing on a firm foundation.

METAL

The steel frame is available in hot-dip galvanized steel. The hot-dip galvanizing is done according to ISO 1461:2009 standard.
